SAFETY FIRST:

Safety helmets and cables with white coating!

Safety cables with white coating and safety helmets are sure allies in every work of installation and construction.

Work Safety is an obligation and a duty of every operator. Safety tools valid, proposed by **Efesto**, are **safety cables** with white coating and **safety helmets**.

The **safety cable with white coating** allow to guarantee a reliable positioning of the headlights and motorized. The white coating increases the performance of the rope, stretching his long life preserving it from weathering, bumps and corrosion. Allows for a quick visual inspection of the rope. The cables are available in lengths of 50 and 100 cm complete with steel carabiner.

There are two ventilated helmets models proposed by **Efesto**:

The helmet **Vertex@Vent** is a ventilated helmet excellent protection for work at height. It has **vent holes with sliding doors** to ventilate the helmet and chin strap highly resistant and antiopening.

The helmet **Alveo Vent** is a ventilated helmet safe protection device for work at height. Shock absorption obtained by deformation of the inner shell of polystyrene foam. It has vent holes to ventilate the helmet and a particularly strong chin and antiopening.
