MECHANICAL PROCESSING

Milling Turning Welding

Efesto meets the most different needs of a constantly changing market thanks to its **advanced technology**, the innovation of the design, to the wide range of products and solutions, to its continued ability to **r-invent** and **r-invent** to improve.

The preliminary step of every process contemplates the evaluation of the feasibility of the detail to be realized through the analysis of the mechanical drawing on paper or in digital format. The machining and final testing of the parts are made by specialized workers. The entire production cycle is constantly monitored to ensure compliance with **identified quality standards**.

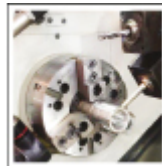

Capacity, knowledge and skills developed in the course of a consolidated production experience combined with **continual innovation** are the connotative elements of a qualitatively valid final product offered at the **right price**.

MILLING

Milling of mechanical components

The milling department performs processing of particular of different types with numerical control machines. The programming allows to constantly monitor each working cycle: from the start to the end of the milling process.

TURNING

Turning with machine at computer numeric control

The turning department executes processing for the realization of details of small and medium size making use of a suitably programmed numerical control machines.

WELDING

Tig and Mig welding on aluminium

The welding department makes **TIG** and **MIG** processes on iron and aluminum. Welding operations are executed by **qualified personnel** and in possession of skills, knowledge and competence.
