ASTRO demountable tower at Prolight + Sound 2017
Perfect balance of cost, performance and handling

On the occasion of his presence on the international stage of the **Prolight + Sound**, **Efesto** presents **ASTRO** tower.

ASTRO tower utilizes **S85A** demountable trusses

Maximum tower height **20 m** – Maximum load **8000 kg**

S85A is a new concept in ultra high load truss that is the perfect choice for any temporary or semi-permanent structure.

Made from high performance aluminum alloy it maintains its form and undergoes minimal deflection even at maximum load allowing higher load capacity at longer spans than any other truss system.

A unique feature of **S85A** truss is that it **can be disassembled, overlaid and moved easily**.

It's disassembled design reduces the transport and storage space required, making it the best investment for large structures - **the perfect balance of cost, performance and handling!**

Efesto wait you in the **Hall 3.0** *Next events 2017*
at **Stand A30** from **04** at **07**
April.
