ASTROroof: the spatial roof with demountable towers
The modular roof system for great shows and events

ASTROroof is a modular spatial structure highest possible load performance with reduced transport volume thanks to demountable towers.

The roof system is based on combinations the aluminium anti skid main chords and diagonal combined with special node points: this combinations can create a roof structure of any desired size or shape. **ASTROroof** can be built up to **37x22 meters in size**.

THE STRENGTHS

1. Height **1.70 cm** makes safe and easy the assembly
2. Aluminium anti **skid main** chords **80 mm** width

The roof is combined with the innovative tower **ASTROtower**, ideal for transport with reduced dimensions.

ASTROtower utilizes **S85A** demountable trusses. Maximum tower **height 20 m** - Maximum **load 8700 kg**. **S85A** can be disassembled, overlaid and moved easily, reduced the transport and storage space required (**-70%**). It's the best investment for large structures - the perfect balance of cost, performance and handling!
