## Efesto: Aluminium structures and solutions for events

*Quality and attention to detail in every product*

**Efesto** designs and manufactures a wide range of **aluminum structures** for events as: concerts, shows, sporting events.

The variety of types and dimensions of the structures makes it possible to respond to every need, providing valid and different solutions.

The **aluminum covered structures** proposed by **Efesto** are easy to assemble and consist almost entirely of standard components and can be: single pitch, double pitch, arched.

Between the aluminum structures realized, the following solutions are widely used:

- **Gazebo**: based on square section truss with 29 or 40 cm long side. They are ideal solutions for small events and exhibition stands. Aesthetically elegant, they are fast and easy to assemble;
- **Kòsmosfera**: coverage of large spaces with refined and elegant shapes. Ideal to create spaces for receptions, weddings, parties of all kinds. Modularity allows the creation of related spaces;
- **Horizòntes**: structured cover from compact flat aluminum modules with built-in sliding guides. Is a revolutionarity alternative to traditional roof systems based on the square truss 40 cm long side. Is the series of infinite possibilities combinatorial with high performances, fast assembly times and reduced handling and storage space
- **Ground Support**: high performance modular structures: with linear or arc-shaped configurations.  
**Ground Support** are structured with **HIGH load trusses** allow the configuration of long and high performance, allow the configuration of high loading capacity and wide spans. These structures are ideal for covering large areas of the stage and backstage during concerts and events;
- **AstroRoof**: spatial roof is based on combination the aluminium anti skid main chordes and diagonals combined with special steel node.  
**AstroRoof** can be used with the innovatives **ASTROtowers**, the *towers completely disassembled*. **AstroRoof** is designed for the management of large events and shows.

To operate safely aluminum structures should be properly ballasted.

The **roof systems solutions** designed and make by **Efesto** are **Made in Italy** and are certified in according to current regulations.

For more information on the **Roof systems** disegned by **Efesto**
